

# ACCELERATE YOUR VACCINE AND IMMUNOTHERAPEUTIC PIPELINE

## Benefit from on-demand expertise to transform your results

You've developed a promising vaccine or novel immunotherapeutic candidate. Now, how do you overcome and anticipate the hurdles ahead therefore improving your probability for clinical success and approval?

We recognized the need to address your challenges and increase the efficiency in the clinical testing process. Leveraging our deep experience with vaccine and immunotherapy trials, we created a new laboratory focused on vaccine and novel immunotherapeutic clinical solutions. This full-service offering combines operational strength with dedicated experts, solely focused on advancing vaccines and immunotherapeutics.

## If you're ready to get more value out of your testing strategy, consider these three guidance points:

- ▶ **Seek responsive solutions matched to your study**

Vaccines and immunotherapeutics require specialized expertise, with a different emphasis than general drug development. Drawing on their direct experience with over 150 vaccine and immunotherapeutic studies, our co-located team of scientific and operational experts, all under one roof, can anticipate potential issues to help you advance your program.

This dedicated team is ready to serve as your single point of contact to simplify your decision-making process. You'll experience a new level of responsiveness as they match solutions to your unique needs and reveal opportunities for efficiencies so you can confidently apply the right resources, at the right time.

- ▶ **Look for specific scientific expertise**

Whether you need support with biomarkers, assays or a global clinical trial strategy, it's important to have trusted expertise close at hand. We offer access to over 3000 assays, both in-house and through the LabCorp Specialty Testing Group, supporting custom and standard development, validation and transfer.

Within our purpose-built facility, you can access exploratory, GLP or CAP-CLIA, BSL2 and BSL3 requirements to achieve your study's specific needs. Our comprehensive scientific support—from nucleic acid isolation and processing to study management—is the key to accelerating your progress ahead.

► **Make the most of your resources**

Beyond scientific and operational capabilities, you also need a partner who can help you maximize your resources throughout the development process. We know how to apply verified processes to increase potential savings in your study execution.

Our rapidly deployed custom kits can accelerate your subject enrollment, while supporting lab automation is easily scalable to meet your testing volume. Combine these factors with our economies of scale and innovative logistics that boast >99% of sample receipt within stability, and you'll uncover new savings while keeping your timelines on track.

Taking full advantage of today's breakthroughs in vaccines and immunotherapeutics calls for more than innovative science—you need a proven model for clinical laboratory success through one comprehensive solutions provider. Together, our team of focused specialists will work with you to advance your program and maximize your efficiencies.

Find out how our experience with over 25 years of testing and trial execution delivers the vaccine and novel immunotherapeutic clinical laboratory solutions you need to tackle challenges and transform your results.
