

XCELLERATE® DATA REVIEW

Xcellerate Data Review allows data managers to detect instances and sources of missing data, high query rates, delayed data entry and other data quality issues that impact trial data integrity.

Manage quality data to help facilitate database lock and deliver submission-ready STDMs with Xcellerate Data Review.

Overview

Managing a clinical data warehouse requires data entry and validation, but many factors can slow down the process. Data overload and multiple data repositories can impact the ability to extract valuable data and increase trial complexity. Ongoing maintenance, inflexibility and lack of integration often hamper efforts to generate clean data, resulting in delays in a trial's timeline.

Xcellerate Data Review addresses these issues by providing detailed tracking of missing pages, listing outstanding queries and identifying data discrepancies with automated reporting.

With this unique system, data managers can track query resolution and data review activities and perform automated, bulk query handling with the EDC for identified discrepancies. Xcellerate Data Review helps identify the sources of issues and results in more informed decisions during trials to ensure readiness for the database lock.

Benefits of Xcellerate Data Review:

- ▶ Future-proof: custom-built architecture designed to scale to current and future data volumes
- ▶ Agnostic: integrates into existing trial management source systems
- ▶ Easy to use: user-centric web and mobile user interfaces
- ▶ Effective: comprehensive discrepancy management with automatic recognition of repeated non-EDC edit checks
- ▶ Efficient: bulk query handling for identified discrepancies, integration with EDC for query automation
- ▶ Comprehensive: advanced workflow engine to accelerate and automate issue resolution
- ▶ Compliant: audit trail and history tracking supports adherence to ICH GCP and other guidelines
